CORE STRENGTHS

System Design

HLD · LLD · Scalability · High availability · Caching · Fault tolerance · Sharding · Async processing · API design

Distributed Systems

Event-driven · Transactional outbox · Pub/Sub · CQRS · Saga · Eventual consistency · Concurrency

Data Structures & Algorithms

Time complexity · Space complexity · Big-O analysis · Hashing · Trees & graphs · BFS / DFS · Binary search · Heaps · Shortest path · Dynamic programming

Software Design

OOP & SOLID · Design patterns · DDD · Hexagonal · AOP

Leadership

Tech leadership · Design docs & RFCs · Code reviews · Mentoring · Ownership

TECH STACK

lang	Java 25, SQL, JavaScript, Python
backend	Spring Boot 4, Spring Security, Spring Data JPA, Hibernate, OpenFeign, REST, OpenAPI
gcp	Cloud Run, Pub/Sub, Cloud Tasks, Cloud Scheduler, BigQuery, Secret Manager, KMS, Cloud Logging
data	PostgreSQL, MSSQL, Elasticsearch, Apache Solr, Redis, Memcached
infra	Docker, Kubernetes, GitHub Actions, GitLab CI, Jenkins, Maven, Git
security	RBAC, SAML2 SSO, JWT, KMS

EDUCATION

B.Tech, Computer Science & Engineering

FISAT · M G University
2014–2018 · GPA 8.50/10

Software Intern · TCS, Kochi

2017 · cross-browser Selenium locator tool

Sainjal Poly

Solution Architect / Senior Distributed Systems Engineer

System Design (HLD / LLD) · Distributed Systems · Data Structures & Algorithms · Event-Driven Architecture · Microservices · Java · Spring Boot · GCP

Portfolio https://sainjalpolys.github.io ↗

8+	2	8	5+
years in enterprise backend	platforms built end to end	shared modules reused	partner integrations

SUMMARY

Solution Architect with **8+ years** building **distributed, event-driven backend systems** for global logistics. Strong CS fundamentals in **data structures, algorithms and system design**, applied hands-on in **Java and Spring Boot on Google Cloud**. I turn ambiguous domains into scalable architectures and ship them end to end.

EXPERIENCE

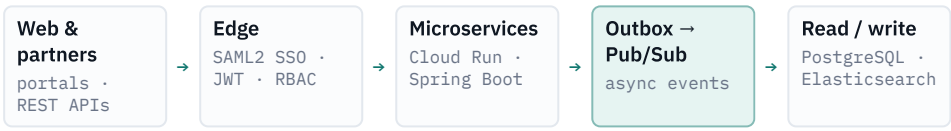

Rappit India · Solution Architect

Jun 2018 – Present · Remote

OMEGA · Enterprise Logistics & TMS Platform — ongoing

Hoyer, Germany · Java 25 · Spring Boot 4 · PostgreSQL · Elasticsearch · GCP

Diagram before code.

- Architected the shared **platform framework of 8 reusable modules** (security, persistence, search, streaming, caching, audit) used across OMEGA's microservices.
- Designed **event-driven integration with the Transactional Outbox pattern over GCP Pub/Sub**, eliminating dual-write inconsistency and decoupling services.
- Built a **CQRS-style read path on Elasticsearch** (outbox-fed index sync, bulk indexing, aggregations) that keeps search traffic off the transactional database.
- Architected a **fully dynamic RBAC and field-level authorization engine**, configured at runtime and served from **cache-aside key-value caches** off the request path.
- Designing **cost calculation and route optimisation** for multi-leg container moves, modelling legs, modes and tariffs as a **weighted graph**.
- Engineered **async and batch processing** on Cloud Tasks and Cloud Scheduler with custom transaction managers for bulk uploads, jobs and data migration.
- Set the engineering bar: **HLD / LLD design docs, architecture and code reviews**, and GitHub Actions **CI/CD across 5 environments** with Sigrid code-quality gates.

NILS · Newport Integrated Logistic System — technical lead · delivered

Newport, Netherlands · Java · Hibernate · MSSQL · Apache Solr · Jenkins

- **Owned the TMS end to end across 5 business domains** (Procurement, Sales, Operations, Finance, Customer Portals) for global container movements.
- Designed the **core framework**: search and sort, attachments, caching, ACL, record locking, job engine, expiry processor and dashboards.
- Built the **quotation and pricing engine** for Procurement, Sales and Tender, plus route suggestions through Cofano.
- Integrated **5+ partner systems** (Cofano, TAT/TPT, BCApp, DMS, INTTRA) and shipped the Bill of Lading and Customer portals.
- **Scaled search horizontally with Solr sharding** and Memcached caching; automated delivery with Jenkins CI/CD.
