Professional summary

Dynamic IT professional with strong expertise in data structures, algorithms, and database design, coupled with extensive experience in building scalable, high-performance systems. Skilled in designing efficient, maintainable solutions, optimizing performance at scale, and delivering reliable architectures. Experienced in cloud-native environments, system integration, and transport management systems (TMS), with a proven ability to collaborate across teams and drive business-aligned technical solutions.

Skills

Java / Spring Boot / Hibernate

Apache Solr / Elasticsearch

Docker / Kubernetes / GCP / Cloud Run

Git / SVN / GitHub / GitLab

Microservices / Distributed Systems / Event-driven
Architecture

OOPS/ REST API / Maven / Memcache

MSSQL / PostgreSQL / NoSQL

Rest API / Maven / Hibernate /

Jenkins / CI-CD / GitHub Actions / GitLab CI

IntelliJ / Eclipse

Data Structures and Algorithms / Performance
Optimization / API Design & Integration

Work history

Solution Architect, 06/2018 to Current

Rappit India – Coimbatore, India (Remote)

1. OMEGA – Logistics Platform (Ongoing)

Hoyer (Germany) | Solution Architect | Java, Spring Boot, JPA, PostgreSQL, Elasticsearch, REST APIs, Google Cloud Run, GCP, CI/CD

Description: Modern enterprise logistics and transport management platform under active development, managing global container movements and end-to-end logistics operations.

- Architected and implemented a **fully dynamic role-based access control (RBAC) system** for complex enterprise authorization.
- Designing and developing **cost calculation and route optimization** for multi-leg logistics scenarios.
- Led architecture and implementation of **scalable, cloud-native components on GCP**.
- Conducted **code reviews** to ensure quality, performance, security, and adherence to standards.
- Authored **technical solution and design documents**, including system architecture, APIs, and integration guidelines.
- Introduced **development process improvements** and best practices for maintainability and scalability.
- Established **development best practices, CI/CD pipelines**, and operational standards to improve build reliability, **deployment speed, and system performance**.
- Collaborated **closely with product, business, and engineering teams** to align technical solutions with business objectives.
- Made key technical decisions on **microservices architecture, database design, APIs**, and integration patterns to ensure scalability and maintainability.

2. NILS – Newport Integrated Logistic System

Newport (Netherlands) | Technical Lead | Java, Hibernate, JPA, MSSQL, Apache SOLR, REST API

Description: Transport management system handling global container movements across Procurement, Sales, Operations, Finance, and Customer Portals.

- Developed the **application end-to-end**, owning complex modules and implementations.
- Built **quotation calculation and business logic frameworks** for Procurement, Sales, and Tender modules.
- Implemented dynamic features: **Route suggestions using Cofano integration, historical logs, and job tracking.**
- Designed and implemented **base framework**: Search/Sort, Attachment Framework, Cache, Authentication & Authorization (ACL), Locking, Dashboards, Job Engine, Expiry Processor, Sharding, Active/Inactive flags.
- Managed **integrations**: Cofano, TAT/TPT, BCApp, DMS, Intra API for seamless data flow.
- Developed **portals**: BOL Portal, Customer Portal for enhanced user experience.
- Handled **Operations modules**: Job History, Document Generation, and Audit Logs for traceability.
- Designed **deployment pipelines with Jenkins**, including CI/CD, environment setup, and access logs.
- Optimized **performance and scalability** using Solr sharding and caching strategies.

Remote Internship, 05/2017 to 09/2017

TCS – Kochi, India

- Utility for automating web element locators.
- The proposed system is an automation utility that identifies the name, ID, class name, CSS selector, XPath, and tag name of every clicked element on a web page, irrespective of the browser used. It was implemented in Java using Selenium WebDriver and JavaScript.

Education

B. Tech: CSE, 01/2018

M G University - Angamaly

- Federal Institute of Science And Technology (FISAT)
- GPA: 8.50

Academic Projects

January 2017 - May 2017, Mini Project, Flower Recognition., Platform: Python, A software which takes an flower image as input and identify the species of the flower. It was implemented in python using svm classifier and opencv.
